| This chart will help you calculate how much water your household uses a month. <br> If you have water-saving appliances or toilets, your use may be somewhat less than <br> the amount you have calculated on the chart. |  |  |  |
| :---: | :--- | :--- | :---: |
| Showers | Multiply the number of daily showers by the number of minutes <br> each shower takes. Now multiply that number by 3 gallons per <br> minute used. Enter that number in the box. |  |  |
| Baths | Multiply the number of daily baths by 36 (gallons in a full bath) <br> or 18 (gallons in a half full tub). Enter that number in the box. |  |  |
| Toilets | Multiply the number of persons in the home by the number of <br> daily flushes. (The average is four per person.) Multiply that <br> figure by 3, the number of gallons used per flush. Enter that <br> number in the box. |  |  |
| Brushing Teeth | Multiply the number of persons in the house by the number of <br> daily tooth brushings. Multiply that figure by 3 (the number of <br> gallons used while the faucet runs for one minute). Enter that <br> number in the box. |  |  |
| Hand Washing | Multiply the number of times per day dishes are washed by the <br> number of minutes the water is running. Multiply that number by <br> 3. Enter that number in the box. |  |  |
| Dishwasher | Add the number of times a week you run the dishwasher and <br> divide by 7 to obtain the average daily usage. Multiply that <br> figure by 12 (the number of gallons used by each wash). <br> Enter that number in the box. |  |  |
| Laundry | Add the number of times a week you run the dishwasher and <br> divide by 7. Multiply that figure by 44 (the number of gallons <br> used per load). Enter that number in the box. |  |  |
| Other Indoor |  |  |  |
| Use | The people in your household use water in other ways. Multiply <br> the number of persons in the household by 10 gallons. Enter <br> that number in the box. |  |  |
| Outside <br> Watering | You also use water outside (watering plants, washing cars, <br> filling pools, etc). Multiply the number of minutes you have a <br> hose turned on by 6 and enter that number in the box. |  |  |
| Now calculate your household's daily use. Add up all the boxes to get an estimate <br> of the gallons of water used daily. Enter in the box. |  |  |  |
| Next, calculate your monthly use by multiplying the amount used daily by 30. <br> Enter that number in the box. This is your estimated monthly usage. |  |  |  |
